#### 1 Problem

(Quadratic Forms/Q.2.23) Solve  $\sqrt{5}x^2 + x + \sqrt{5} = 0$ 

## 2 Solution

Let 
$$y = \sqrt{5}x^2 + x + \sqrt{5} = 0$$
.

Then, y can be represented in the vector form as:

$$y = \mathbf{x}^T \begin{pmatrix} \sqrt{5} & 0 \\ 0 & 0 \end{pmatrix} \mathbf{x} + \begin{pmatrix} 1 & 0 \end{pmatrix} \mathbf{x} + \sqrt{5}$$
 (2.0.1)

where

$$\mathbf{x} = \begin{pmatrix} x \\ 0 \end{pmatrix} \tag{2.0.2}$$

Substituting y = 0, we get:

$$\mathbf{x}^T \begin{pmatrix} \sqrt{5} & 0 \\ 0 & 0 \end{pmatrix} \mathbf{x} + \begin{pmatrix} 1 & 0 \end{pmatrix} \mathbf{x} + \sqrt{5} = 0 \tag{2.0.3}$$

$$\sqrt{5}x^2 + x + \sqrt{5} = 0 \tag{2.0.4}$$

$$\left(x - \left(\frac{-1}{2\sqrt{5}}\right)\right) \left(x - \left(\frac{-1}{2\sqrt{5}}\right)\right) = 0$$
 (2.0.5)

$$x = \begin{pmatrix} \frac{-1}{2\sqrt{5}} \\ \frac{\sqrt{19}}{2\sqrt{5}} \end{pmatrix}, \begin{pmatrix} \frac{-1}{2\sqrt{5}} \\ -\sqrt{19} \\ 2\sqrt{5} \end{pmatrix}$$
 (2.0.6)

As we can see from the graph,  $\sqrt{5}x^2 + x + \sqrt{5} = 0$  does not intersect the x-axis anywhere, and hence has no real roots.

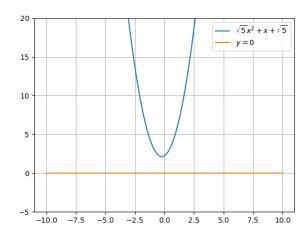

Fig. 0: Graph of  $\sqrt{5}x^2 + x + \sqrt{5} = 0$
